

RUSTLING LEAF BONSAI

Frank McDermott

Looking forward to the demo on April 13th at the North Carolina Arboretum. I will be building a lace bark elm forest on a granite slab with approximately 30-50 trees. I will be using muck that I make myself and going over techniques of tree placement due to size, how to work the roots, how to apply moss and multiple other components it takes to create a slab forest.

The trees I will be using were collected 2 years ago and trained just for this purpose. While doing the demo I will answer any questions that viewers may have to the best of my abilities. This slab planting will be donated to the club when I am finished.

Slab kits will be available for purchase for you to take home. (Lace Bark Elm Trees)

\$100 per kit

1 bag of moss

1 bag of muck

12-14 trees of various sizes

1 Granite slab of moderate size (5-9 inch various shape)

Kits will be pre-paid for delivery at the April 13th meeting, Blue Ridge Bonsai Society at the North Carolina Arboretum

Venmo and Paypal accepted
